"Nazmul did an excellent job modifying the image upload script for my website. He interpreted the specification well and his solution to extra drag/edit feature I required was even better than what I asked for! Communication was easy and he provided lots of updates throughout the project via email and skype. Will definitely work with him again. You can hire this programmer with confidence!"

I am creating a multi vendor ecom website using the Iscripts Multicart 2.4 Script. I need to modify the image file upload script as it curenly only allows one image to be uploaded at a time, and requires a separate small gallery image and main image...
